Subject sharing

Subject sharing:

- two clauses are conjoined
- only one subject in the surface structure
- subject is interpreted in both conjuncts
 - ⇒ suggests subject taking scope over both conjuncts
 - ⇒ subject must c-command both conjuncts

- (1) The man saw the woman and ran away.
= The man saw the woman and the man ran away.
≠ The man saw the woman and the woman ran away.

⇒ SVO&VO word order

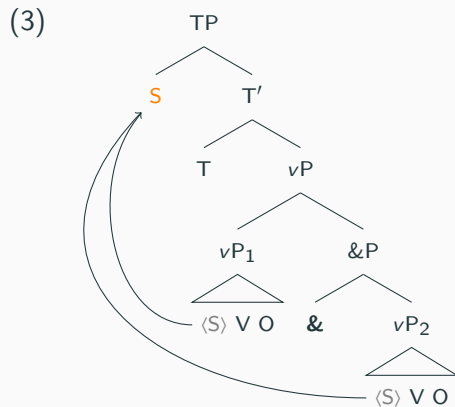

Subject sharing

Straightforward analyses for English:

1. VP-coordination dominated by vP
e.g. Keine (2013) for a similar approach for subject sharing
in same subject switch reference contexts

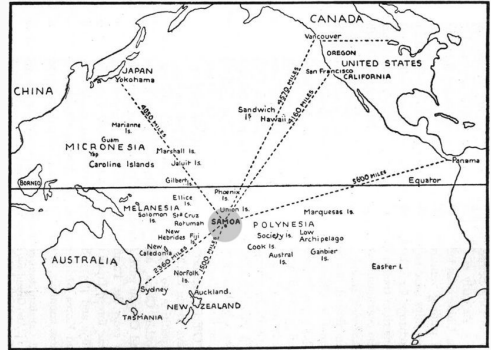

2. vP-coordination + ATB-movement
e.g. Flor & Zoppi (2021)

Background on Samoan

Samoan:

- Austronesian language
- Ergative-Absolutive alignment
- leftwards head-orientation
- verb-initial (V1) language
- dominant word order in transitive clauses: **VSO**

- (4) Lena sa va'ai Peter i se solofanua.
PST look Peter LD ART horse
'Peter looked at a horse.'

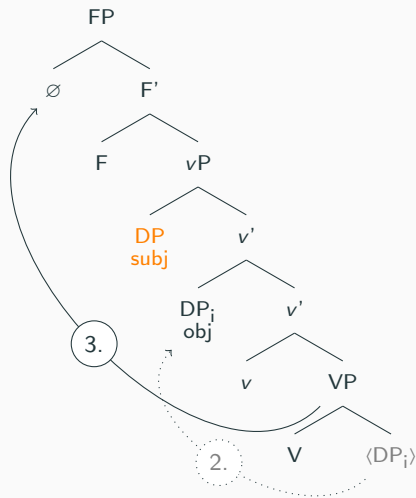

Background on Samoan

VP-fronting (Collins 2017):

1. S in SpecvP
2. Object shift
3. remnant VP-fronting

⇒ Derives VSO order

- (5) Lena sa va'ai Peter i se solofanua.
PST look Peter LD ART horse
'Peter looked at a horse.'

Subject sharing in Samoan

- (6) Lena sa [[tā e le teine le la'au] ma [si'ia lugā le laulau]].
PAST hit ERG ART girl ART tree and lift up ART table
'The girl hit a tree and lifted a table.'

1. only one S for two predicates
2. S is embedded in first conjunct
 - ⇒ S cannot take scope over both conjuncts
 - ⇒ 'English' derivations do not work
3. word order: TAM [V S O] & [V O]

Subject sharing in Samoan

- (6) Lena sa [[tā e le teine le la'au] **ma** [si'ia lugā le laulau]].
PAST hit ERG ART girl ART tree and lift up ART table
'The girl hit a tree and lifted a table.'

1. only one S for two predicates
2. S is embedded in first conjunct
 - ⇒ S cannot take scope over both conjuncts
 - ⇒ 'English' derivations do not work
3. word order: TAM [V S O] & [V O]

Could it be *pro*-drop?

Subject sharing in Samoan

A straightforward solution: subject *pro*-drop

- (7) Lena sa [[tā e le teine le la'au] ma [si'ia lugā *pro* le laulau]].
PAST hit ERG ART girl ART tree and lift up *pro* ART table
'The girl hit a tree and lifted a table.'

Subject sharing in Samoan

A straightforward solution: subject *pro*-drop

(7) Lena sa [[tā e le teine le la'au] ma [si'ia lugā *pro* le laulau]].
PAST hit ERG ART girl ART tree and lift up *pro* ART table
'The girl hit a tree and lifted a table.'

- (8) a. Agagafi, lena sa fo'i mai **Melanie** i le fale.
yesterday PAST come to Melanie LD ART home
'Yesterday, Melanie came home.'
- b. Lena sa siva ***(gaia)**.
PAST dance 3.Sg
'She danced.'

⇒ subject *pro*-drop is not possible (contra Homer 2009, Koopman 2012, Muāgututi'a 2017)

Subject sharing in Samoan

A straightforward solution: subject *pro*-drop

(7) Lena sa [[tā e le teine le la'au] ma [si'ia lugā *pro* le laulau]].
PAST hit ERG ART girl ART tree and lift up *pro* ART table
'The girl hit a tree and lifted a table.'

- (8) a. Agagafi, lena sa fo'i mai **Melanie** i le fale.
yesterday PAST come to Melanie LD ART home
'Yesterday, Melanie came home.'
- b. Lena sa siva ***(gaia)**.
PAST dance 3.Sg
'She danced.'

⇒ subject *pro*-drop is not possible (contra Homer 2009, Koopman 2012, Muāgututi'a 2017)

How can these constructions be derived? What is the underlying structure?

This phenomenon **has not been discovered in Samoan** beforehand. Based on the data I **elicited with native speakers**, I claim the following.

1. Samoan subject sharing constructions are coordinative.
2. Their structure involves low-coordination.
3. They cannot be derived convincingly by the most prominent approaches.

Coordination vs. subordination

- Subject is absent in second conjunct
- Samoan does not allow for *pro*-drop
- Subject apparently takes wide scope

What if Samoan subject sharing constructions were subordinative?

Coordination vs. subordination

Asymmetric extraction is not possible:

- (9) *O lea le mea sa [ta e Peter ___] ma [ai se apu]?
PRES what ART thing PAST hit ERG Peter and eat ART apple
What did Peter hit and ate an apple?

⇒ suggests coordinative structure

Coordination vs. subordination

Asymmetric extraction is not possible:

- (9) *O lea le mea sa [ta e Peter ___] ma [ai se apu]?
PRES what ART thing PAST hit ERG Peter and eat ART apple
What did Peter hit and ate an apple?

⇒ suggests coordinative structure

Object ATB movement is possible:

- (10) O lea le mea sa [maua e Peter ___] ma [gaoi ___]?
PRES what ART thing PAST find ERG Peter and steal
What did Peter find and steal?

⇒ suggests coordinative structure

Coordination vs. subordination

- Subject is absent in second conjunct
- Samoan does not allow for *pro*-drop
- Subject apparently takes wide scope
- Samoan subject sharing constructions are coordinative

Do subject sharing constructions have the same structure as clausal coordination?

Coordination structure

Clausal coordination

- (11) [Na maua e Petelo se ta'avale] ma [na gaoi e Malia le uila].
PAST find ERG Peter ART car and PAST steal ERG Mary ART bike
'Peter found a car and Mary stole a bike.'

- Conjunction of two transitive clauses
- VSO&VSO word order → 2 subjects
- 2 TAM markers
 - ⇒ one TP in each conjunct
 - ⇒ both conjuncts must be at least the size of TP

Coordination structure

Can subject sharing constructions have 2 TAM markers as well?

(12) Lena sa [fasi e le faiaoga le tama] ma [siva].
PAST beat ERG ART teacher ART boy and dance
The teacher hit the boy and danced.

(13) [Sa tā e le faia'oga; le tama] ma [sa siva *(gaia;)].
PAST hit ERG ART teacher ART boy and PAST dance 3.Sg
The teacher hit the boy and danced.

⇒ only one TP is present in subject sharing constructions

⇒ conjuncts must be smaller than TP

⇒ coordination must apply below TP

Summary

- Subject sharing constructions display **coordinative properties**.
 - However, they differ from clausal coordination.
 - They include only **one TP**.
 - The conjuncts must be smaller than TP.
- ⇒ The coordination must apply low in the structure.

Double-Duty-Problem

(14) *The Double-Duty-Problem:*

A single subject is supposed to serve as the subject of two different predicates at the same time. (Barnickel 2017:68 for German SLF-constructions)

1. *The Subject-Scope-Issue:*

In a coordination of two verb-initial conjuncts, the embedded subject in the first conjunct does not c-command and, thus, does not scope over the second conjunct.

2. *The Subject-Absence-Issue:*

In a coordination, the subject in the second conjunct does not appear in surface structure.

Double-Duty-Problem

(14) *The Double-Duty-Problem:*

A single subject is supposed to serve as the subject of two different predicates at the same time. (Barnickel 2017:68 for German SLF-constructions)

1. *The Subject-Scope-Issue:*

In a coordination of two verb-initial conjuncts, the embedded subject in the first conjunct does not c-command and, thus, does not scope over the second conjunct.

2. *The Subject-Absence-Issue:*

In a coordination, the subject in the second conjunct does not appear in surface structure.

How low does the coordination apply? At FP- or VP-level?

FP-coordination

(16)

FP-coordination

Pro:

- solves *Double-Duty-Problem* via ATB movement
- TAM-marker in T takes scope over both conjuncts

Contra:

- derives incorrect word order → S TAM [V O] & [V O]

VP-coordination

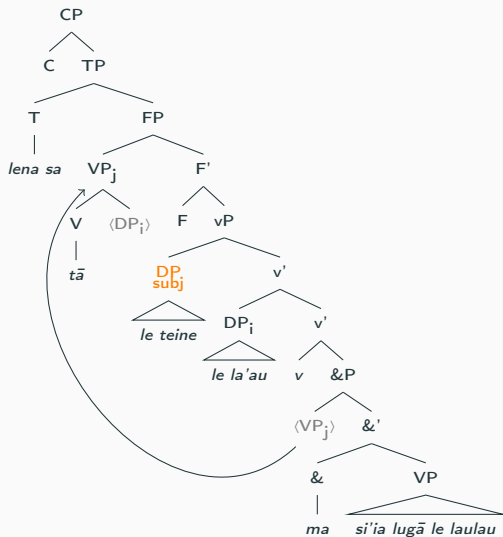

- conjuncts are VP
- derivation of *Double-Duty-Problem* by base-generating the subject in a c-commanding position (Höhle (1990), Johnson (2002), among others)

(17) Lena sa [tā e le teine le la'au] ma [si'ia lugā le laulau].
PAST hit ERG ART girl ART tree and lift up ART table
The girl hit a tree and lifted a table.

VP-coordination

(18)

VP-coordination

Pro:

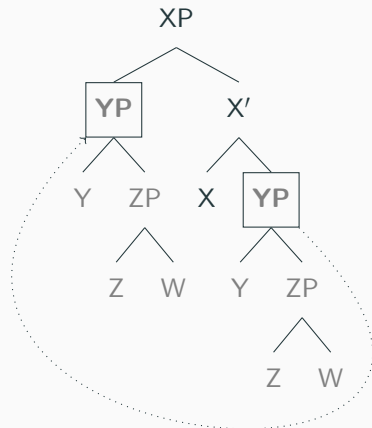

- solves *Double-Duty-Problem*
- fronted VP must necessarily move to a position higher than the subject → V+S order
- TAM-marker in T takes scope over both conjuncts
- derives correct word order

Contra:

- CSC violation due to object shift and remnant VP-fronting

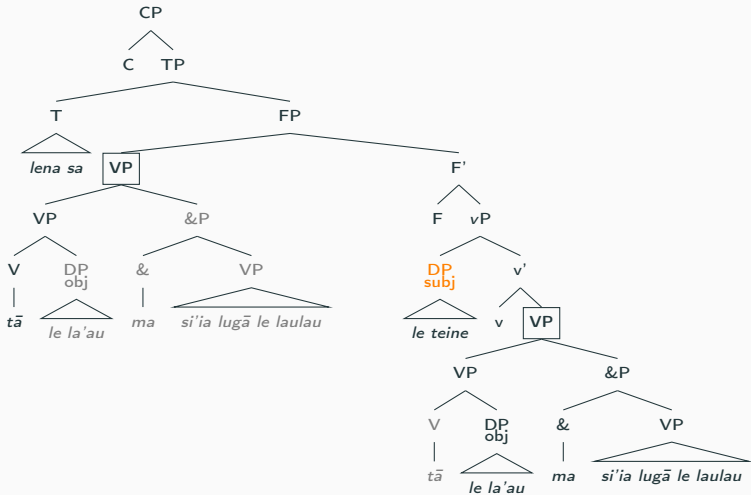

VP-coordination & distributed deletion

- movement = **copy** and **delete**
- two copies of an element can exist simultaneously
- subsequent deletion may apply to both copies, but only partially so (Fanselow & Ćavar 2002)
- can be combined with low-coordination

VP-coordination & distributed deletion

(19)

VP-coordination & distributed deletion

Pro:

- solves *Double-Duty-Problem* via VP-coordination
- no CSC violation
- TAM-marker c-commands both conjuncts
- derives correct word order

Contra:

- difficult to motivate this approach in Samoan by using pragmatically conditioned features like *focus* and *topic* (as in Fanselow & Āavar 2002)
 - unlikely that Samoan subject sharing constructions involve pragmatic information which is fundamentally different from that of other coordination constructions
- However, see van Urk (2022) for a similar proposal with different features.

Conclusion

- Samoan subject sharing constructions involve coordinative structure.
- As the observations show, they differ from clausal coordination.
- They cannot be derived convincingly by *clausal coordination*, *predicate/VP-coordination*.
- Future research: Evidence for or against VP-coordination
 - ⇒ Possible semantic diagnostic: *free-agent-cumulativity*

Clausal coordination

(20) [Na maua e Petelo se ta'avale] ma [na gaoi e Malia le uila].
PAST find ERG Peter ART car and PAST steal ERG Mary ART bike
'Peter found a car and Mary stole a bike.'

- Conjunction of two transitive clauses
- VSO&VSO word order

Clausal coordination

(21)

Clausal coordination

Can derive the following:

- the two conjuncts are at least the size of TP
- there are two TAM-markers in the structure
- there is an obligatory subject in the second conjunct
- predicate fronting takes place in both conjuncts
- only one SpecCP position is necessary

(22) O ai na maua se ta'avale ma na gaoi le uila?
PRES who PAST find ART car and PAST steal ART bike
'Who found a car and stole a bike?'
